

Case Study 4

Acquirer Rapid Implementation

Business Need

An acquirer had a requirement to implement an interface to a major payment network in a relatively short timeframe.

They did not want to add to their current authorization environment.

They wanted a solution supplier with extensive experience in payment processing and the "ins and outs" of connecting to major credit and debit networks.

They wanted to implement the interface as rapidly as feasible.

Solution

OLS proposed OLS.Switch, several network interfaces and consulting services support for the implementation.

Results

The results of this project include:

- OLS Knowledge transfer to clients staff so they could be self-sufficient
- OLS.Switch installed and running test transactions less than three weeks after contract signed.
- OLS.Switch certified and running production transactions to a major payment network less than 60 days after contract signed.
